

What's New in TwonkyServer v7.1.2

1 Improvements

- *.flv or *.f4v container with MP3 content are now correctly recognized as audio.

2 Bug fixes

- Fixed a problem for .mov videos where sometimes the resolution was wrong
- MacOS versions are signed now

What's New in TwonkyServer v7.1.1

1 New Feature

- Added PIFF support: .isma and .ismv file extensions
- Added support for MP3 included in in FLV/F4v container

2 Improvements

- Improved subtitle support (.srt) for mpg,mkv,avi,wmv files. Please note that you have to make a database rebuild if you add subtitle files after content file.

3 Bug fixes

- Fixed: Aggregation feature
- Fixed a problem with .mp4 videos that caused high CPU-usage
- Fixed a performance issue when trying to share a non-existing location
- Fixed high Resolution icon support for TwonkyServer
- Fixed a problem with saving username & password on the web UI
- Fixed a bug for myTwonky's myFavoritePhotos; through JSON and RSS only the thumbnails were shown
- Fixed a bug for beaming audio via Airplay
- Fixed the whitelisted directories for MacOS

4 Known issues

- If a shared folder option is set to "Video" only .mp4-videos (and maybe other container formats) are not detected and therefore not shown in the shared media items. As workaround: Set the shared folder option to "All content types".

What's New in TwonkyServer v7.1

1 New Feature

- Added Airplay support for Beaming (Airplay support not available on Linux)
- Added auto-update for TwonkyServer
- Added auto-update for device-database
- Added Bookmarks / Crosslinks

2 Improvements

- Improved speed for browse and search requests for scaled images
- Added ability to upload playlists from files
- Improved support for "Netgear EVA91x0"
- Improved support for "Naim Audio Streamer"
- Improved aggregation performance
- Improved handling of embedded album art and of embedded thumbnails
- Improved mpeg handling for some Sony devices
- Improved YouTube handling
- Improved interoperability with some Samsung TVs
- Improved sharing options for mobile apps
- Improved settings pages

3 Bug fixes

- Fixed a problem when trying to create a new user for "sync"
- Fixed a problem with the duration display for videos from myTwonky.com
- Fixed a problem when MP3 files were tagged with ID3 v.2.3.0
- Fixed a problem with default album art
- Fixed thumbnail display for .mp4 files on Sony PS3
- Fixed a server restart issue when changing the language settings
- Fixed Most Viewed and Last Viewed playlist and slideshow misbehavior
- Fixed a problem when more than one external drive is attached and the server is restarted
- Fixed a problem for Mac OS that disabled automated server restart after changing myTwonky.com username
- Fixed a problem that made the advanced menu inaccessible after changing the language settings
- Fixed a problem with the Twonky shortcut and myTwonky.com where TwonkyServer did not start and myTwonky.com page did not open after installation
- Fixed language setting problems for Netherlands.
- Fixed some wakeup problems when the system running TwonkyServer was on hibernate or sleep
- Added some missing translations (CHS,CHT,KO,FI)

- Fixed a problem with embedded album art for WD TV Live.
- Fixed a problem where the last shared folder couldn't be removed via web settings page
- Fixed a problem when there were more than 20 nested folders
- Fixed a problem for Philips TVs (e.g. Models 7605, 8605) with streaming DivX/Xvid
- Fixed a problem where the initial child count was displayed incorrectly

4 Other chances

- New terms of service (TOS)

5 Known issues

- Aggregation feature is not working as intended. The fixed feature will be available for 7.1.1

What's New in TwonkyServer v7.0.9

1 New features

- Added MIDI file support (.mid)
- Added .webm file support
- Added QuickTime support (.qt)
- Added support for .f4v files
- iOS: serving .wav files is supported now

2 Improvement

- Added an Exit option to the Twonky menu on MacOS
- Improved startup behavior of TwonkyServer - no initial restart is required any longer

3 Bug fixes

- Fixed the 'Autostart' option for TwonkyServer
- Fixed a problem where Web UI of the server stops responding when attempting to load photo thumbnails
- Fixed a bug for broken web-browse when using Firefox
- Fixed a saving problem when the settings page is secured by user
- Fixed a problem where the Advanced menu was not accessible after a change of the language
- Fixed a problem where the language wasn't reset after doing a "Reset to Defaults"
- Fixed a problem for the "Recently Played" list that didn't show the correct information
- Fixed a bug where "Featured Photos" couldn't be accessed on Linux & Mac OS using default web browser
- Fixed a thumbnail problem for music content on WDTV
- Fixed a problem for images with a resolution higher than 3165x4747 for Samsung TVs and WD TV
- Fixed a problem for Mac OS where an additional server was started when a new network connection was established (NIC change)

- Mac OS: Fixed some problems for hibernation and sleep
- iOS: fixed a bug where photos and videos weren't indexed on iOS 4.x
- iOS: fixed a bug where photos synced with iTunes weren't added to the TwonkyServer library
- iOS: Fixed a server crash that occurred because music-videos were recognized as music-only
- iOS: Fixed a server crash when a music track was longer than one hour

What's New in TwonkyServer v7.0.8

1 New Features

- Preserve settings when installing a newer TwonkyServer version is now possible.

2 Improvements

- Increased the response time behavior of the server
- Added a notification for updates from Twonky 6 to Twonky 7 where to find the license key
- Improved interoperability with Netgear EVA91x0
- Improved response time for internal and external IP addresses.
- Thumbnails in web-browse are links to the media item now.
- Improved handling of the friendly name which is now visible on the web configuration pages.

3 Bug fixes

- Fixed a bug for MP3 files that were tagged with ID3 v.2.3.0
- Fixed a bug where no new user for sync (WebDAV) could be created
- Fixed time seek on images. This is not done any longer.
- Fixed path traversal issue that was also present in the WebDAV server (DDIVRT-2012-40: PacketVideo TwonkyServer and TwonkyMedia Directory Traversal)
- Fixed a bug where 'undefined' nodes appeared when one or two content types (e.g. Music and Photos) are missing
- Fixed a bug for language setting changes in the tray app
- Fixed a bug when part of the settings pages weren't accessible when Adblock-plus plugin was installed on Firefox
- Fixed a bug where thumbnails for containers were missing
- Fixed a problem for embedded album art in FLAC files
- Fixed a problem for default album art
- Fixed problems for special characters in friendly name. Apostrophe (') should be avoided even from the users.
- Fixed a bug for username/password that wasn't shown on the settings pages
- Fixed a problem for Safari where pop-up windows were blocked when the user tried to register the server.
- Fixed a problem for thumbnail display

- Added C:\Program files (x86) to the blacklisted directories
- Fixed a problem with the default friendly name of the server.
- Unified album art usage and display for locale my library view and for my.twonky.com view
- Translation updates for the Sync-Setting page
- Fixed a problem where license keys couldn't be correctly pasted (MAC/Safari)
- Mac: Fixed a problem for playlist. They no longer get corrupted when edited by the user
- PS3: Fixed a problem for album art
- Fixed a bug where the Sync pages weren't displayed correctly when using Firefox on a Linux system

What's New in TwonkyServer v7.0.7

1 Bug fixes

- Extended the accounting module to support new type of license keys

What's New in TwonkyServer v7.0.6

1 New Feature

- Extended JSON interface:
 - Added function to fetch metadata of a single item
 - Added additional properties
 - Added res elements array

2 Improvements

- Improved memory handling for devices with limited memory
- Extended the transcoding architecture to allow redirection to external transcoding servers
- Improved the handling when two or more TwonkyServers are in one network (visibility for DMPs)
- Added support for downloading media items
- Extended 3rd party database import API

3 Bug fixes

- Fixed directory traversal vulnerability and thus closing a security gap (DDIVRT-2012-40: PacketVideo TwonkyServer and TwonkyMedia Directory Traversal)
- Fixed problems with maxitems when a new location is added
- Fixed a bug with user authentication
- Fixed a problem caused by case-sensitivity (.PCM-files)

- Fixed a problem when two or more additional drives are attached and TwonkyServer is restarted
- Fixed a problem when removing the friendly-name of TwonkyServer
- Fixed Linux installer script; now the “Register server”-button is working

What's New in TwonkyServer v7.0.5

1 New Feature

- Adding .nomedia to a folder or a file name prevents TwonkyServer from sharing the content

2 Bug fixes

- Support improved playlist management by Twonky client

What's New in TwonkyServer v7.0.4

1 Bug fixes

- Fixed automated update check for TwonkyServer

What's New in TwonkyServer v7.0.3

1 Improvements

- Filter certain Unicode characters for WMP12; prevents WMP12 from crashing
- Add support for .mpeg4 file extension
- Convert PNG album art now to JPEG on Windows and MAC (only available on platforms that support ‘convert’)

2 Bug fixes

- Several problems related to installing TwonkyServer on MacOS have been resolved
- Displaying of thumbnails works again on PS3
- Resolved a number of issues around sleep and hibernate modes. TwonkyServer and associated processes should now continue to work after wakeup
- Fixed few minor memory leaks

3 Other Changes

- New terms of service (TOS)

What's New in TwonkyServer v7.0.2

1 Improvements

- WebDAV port number configurable
- Support for the file extension .mpeg4

2 Bug fixes

- Wakeup of TwonkyServer after sleep or hibernate fixed
- Playlist issue after exit and restart of the server fixed
- iOS 5 cover art problems fixed
- WMP-created playlists (.wpl) are now handled correctly
- Album art problems for music files fixed
- WebDAV/Sync-folder permissions fixed

3 Other Changes

- New terms of service (TOS)

What's new in TwonkyServer 7.0

4 New Features

- Integration with myTwonky.com to access, manage and enjoy online services through TwonkyServer (optional feature)
- Included Twonky WebDAV server for content sync
- TwonkyProxy for beaming online content became a stand-alone module
- Added DLNA CVP-EU media profile support
- Compliance to UPnP CTT v2.0
- DTCP-IP move support (optional feature)
- URL unraveling in proxy module can be updated over-the-air independently from server installation
- Privacy settings for content aggregation
- Video thumbnail support (embedded and external files)
- Video thumbnail generation with ffmpeg (if available)
- Support for upload resume
- Sort support for upnp:seriesTitle and upnp:seriesID
- Search support for pv:custom
- Automatically re-create missing time seek files on restart
- TLS/SSL encryption for settings pages and browser-based content access (remote access)

5 Improvements

- New configuration UI and myLibrary screens (formerly known as webbrowse)
- Configuration UI is IE 9 compliant
- Updated jpeg scaler (reduced memory footprint by 90%)
- Updated cache manager for faster cleanup
- Time seek support is now configurable
 - can be disabled
 - if enabled, a faster, but less accurate method for generating the time seek tables can be selected
- Improved time seek accuracy
- Extended 3rd party database import API
 - Added support for online resources through standard API
 - added support for a feedback channel to allow the exporting application to get the import results
- Improved redirect handling in proxy module
 - The proxy supports a wider range of redirect mechanisms when fetching content from the internet
- Improved duplicates detection algorithm for aggregated content based on mime types

- New RSS and JSON generator modules
 - RSS and JSON feeds are now generated through the same backend module as the UPnP navigation tree. This ensures a uniform user experience independent of the mechanism the user accesses the content
- Enhanced transcoding API based on ffmpeg
 - New parameters like frame rate
 - Selection of best target format based on client db
- Enhancement of various file scanners, e.g. to obtain additional metadata
 - OGG, MP4, FLAC, MP3, JPG, MPEG
- Startup sanity-checks preventing startup if critical resources like views, device description, language file, folders to store db and cache or application data are not accessible
- WPL playlists may now contain online (http) resources:
`<media src="http://stream" title="my favorite" mimetype="type" />`
- Added sample web UI code for embedded control points
- Removed dependency from external ping tool (Linux-only)
- Removed redundancy in picture and video navigation tree
 - "By Year" was removed because this is also part of "By Date"
- Mac OS version
 - Added new tray icon to control server status and open settings UI
 - TwonkyServer is now re-locatable
 - New installer
 - Support for file system events

6 Bug fixes

- General bug fixes
 - TS fails to share folders that contain a comma in their name
 - Parsing XML goes into an endless loop if the xml contains a res with an unsupported mime type
 - Support for file extension in upper case for Linux platforms
 - Roku SoundBridge cannot stream AAC/M4A
 - On-the-fly transcoder is started on HEAD requests
 - Dates earlier than 1970 shown as 1970-01-01
 - FLAC files without embedded album art shown under the year 0000
- DTCP-IP related fixes
 - Duration is wrong for long content after moving from REGZA
 - Secure content re-scan is being done at every TMS restart

7 Other Changes

- Renamed binaries
 - twonkymedia → twonkystarter
 - twonkymediaserver → twonkyserver
